FIREWALL

THANKSGIVING 2026 · FOR THE FRIDGE

AI Family Safety Guide

This Thanksgiving, spend 10 minutes on these 3 steps, and your loved ones will be safer than 66% of Americans.

1 Turn on 2FA

☐ Add a second layer of defense to your email or bank account: a second code that you read off a special app on your phone. That way, if hackers steal your password, they still can't access your email.

Google Authenticator

2 Get a password manager

☐ Your password is too short right now. Download Bitwarden, a free password manager that automatically creates highly secure passwords and keeps them in an encrypted vault.

bitwarden.com/download

3 Pick a family safe word

☐ AI hackers are learning to pose as your family members, including with lifelike computer voices. If an unknown number calls asking for money and says it's a relative, don't give it to them unless they say the secret word. Example: "rabbit!"

4 Sign the petition:
freeze AI development NOW

☐ We need to force the AI companies to freeze AI development: stop making their products more dangerous and stop creating new AI dangers until we get the safety situation under control. Please sign our petition and join our movement at **firewallaction.org**.

firewallaction.org

This is Safety Level 1. There are many more steps you can take, so family photos don't get lost, your private texts don't get leaked, and you don't get hurt if AI cyberattacks cause power or water outages. Visit **firewallaction.org** to learn more.

FIREWALL

FOR AFTER DINNER

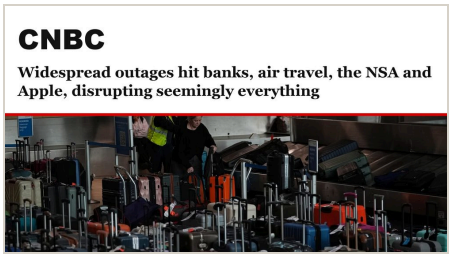

AI companies in California are privately preparing for an AI hacking disaster in 2027. Here are a few quick steps to protect yourself and everyone else.

What's going on?

- **AI is getting twice as smart every 6 months.**
- **In 2026, AI became superhuman at hacking.** It finds weak points in code that no human had seen before.
- **So the hacks are everywhere:** grocery store fridges, billions in crypto, scams on seniors. Banks are crashing their own servers trying to keep up.

It's going to get worse

OpenAI and Anthropic are privately planning for a major disaster in 2027. Maybe AI hacks a hospital. Maybe it takes down a power grid or a water system.

> **"Many AI industry insiders told Axios they believe a major event will occur in the next six to 12 months."**
>
> Axios, Oct. 9, 2026

Freeze AI now

Individual preparation is only the first step. To make our entire society safe from AI hacks, we need to act together and force the AI companies to slow down and focus on safety instead of racing to make more powerful, dangerous AI models.

Leaders from both parties, from Barack Obama to Tucker Carlson, warn that humanity could lose control of AI if we let the companies keep racing. But most politicians are ignoring the problem or paid off by Big Tech.

AI safety experts believe the best step to stop AI cyberattacks is to FREEZE the development of new AI models until we can get the safety situation under control. **Please sign our petition to Congress and other elected leaders at firewallaction.org.**
